1. Purpose

The purpose of this document is to define the standard customer verification process followed by Aegis Bank.

This process ensures:

- Correct customer identification.
- Prevention of identity fraud.
- Protection of customer accounts.
- Compliance with banking requirements.

---

2. Scope

This process applies to:

- Customer support representatives.
- Branch employees.
- Digital banking teams.
- KYC officers.
- Compliance departments.

It covers:

- New account opening.
- Account access requests.
- Transaction verification.
- Customer information updates.
- Digital banking authentication.

---

3. Customer Verification Principles

Aegis Bank follows these principles:

Accuracy

Customer information must be verified correctly.

Security

Customer identity data must remain protected.

Privacy

Only authorized employees can access verification information.

Compliance

Verification must follow approved banking policies.

Customer Experience

Verification should be secure and convenient.

---

4. Verification Requirements

Customer verification may require:

Identity Information

Examples:

- Full legal name.
- Date of birth.
- Registered contact details.
- Customer identification number.

Supporting Documents

Examples:

- Government-issued identification.
- Proof of address.
- Additional verification documents.

---

5. Customer Identification Process

The standard verification workflow:

Customer Request

↓

Identity Information Collection

↓

Document Validation

↓

Security Checks

↓

Verification Approval

↓

Service Access Granted

---

6. Document Verification Procedure

Submitted documents must be reviewed.

Verification checks include:

- Document authenticity.
- Expiry status.
- Customer information matching.
- Security features.

Employees must verify:

✅ Name matches records
✅ Identification is valid
✅ Information is complete
✅ Documents are not suspicious

---

7. Digital Identity Verification

Aegis Bank supports secure digital verification.

Digital verification may include:

- Secure login authentication.
- One-time passwords (OTP).
- Identity confirmation.
- Device verification.

Digital Verification Flow

Customer Login

↓

Authentication Request

↓

Identity Validation

↓

Security Check

↓

Access Approved

---

8. Biometric Verification Standards

Where applicable, Aegis Bank may use biometric verification.

Examples:

- Facial verification.
- Fingerprint authentication.

Biometric systems must:

- Protect biometric data.
- Use encryption.
- Follow privacy requirements.
- Maintain audit records.

---

9. Risk-Based Verification

Verification requirements depend on risk level.

Risk Level	Verification Requirement
Low	Standard verification
Medium	Additional checks
High	Enhanced verification

Examples:

Low Risk

Customer updates phone number.

Medium Risk

Customer requests account changes.

High Risk

Large transaction or suspicious activity.

---

10. Fraud Prevention Controls

Aegis Bank uses multiple security controls.

Controls include:

- Identity matching.
- Suspicious activity detection.
- Transaction monitoring.
- Access logging.

Fraud indicators:

- Multiple failed verification attempts.
- Unusual account activity.
- Suspicious documents.
- Unauthorized access attempts.

---

11. AI-Assisted Verification

Aegis AI OS supports verification teams.

AI can assist with:

- Document classification.
- Policy lookup.
- Risk identification.
- Verification workflow guidance.

AI Workflow:

Verification Request

↓

AI Analysis

↓

Policy Retrieval

↓

Risk Assessment

↓

Human Review

↓

Final Decision

AI does not independently approve sensitive verification decisions.

---

12. Verification Failure Handling

If verification fails:

Process:

Verification Failed

↓

Reason Identification

↓

Additional Information Request

↓

Security Review

↓

Final Decision

Common reasons:

- Incorrect information.
- Expired documents.
- Suspicious activity.
- Identity mismatch.

---

13. Record Management

Verification records must be:

- Securely stored.
- Access controlled.
- Properly maintained.
- Available for audits.

Records include:

- Verification status.
- Documents reviewed.
- Approval history.
- Audit logs.

---

14. Practical Examples

Example 1 — New Account Opening

Customer requests a new account.

Process:

1. Identity information collected.

2. Documents verified.
3. KYC checks completed.
4. Account approved.

Example 2 — Suspicious Login Attempt

Customer account accessed from unusual location.

Process:

1. Security verification triggered.
2. Additional authentication required.
3. Access reviewed.

Example 3 — Customer Information Update

Customer requests address change.

Process:

1. Identity verified.
2. Supporting documents checked.
3. Information updated.

---

15. Frequently Asked Questions (FAQs)

Q1. Why is customer verification required?

To prevent fraud and protect customer accounts.

Q2. Can AI verify customers automatically?

AI assists verification but final approval requires authorized employees.

Q3. What happens if verification fails?

Additional checks are performed before access is provided.

Q4. How is customer information protected?

Through encryption, access controls, and security monitoring.

Q5. Does every customer require the same verification?

No. Verification depends on risk level and service type.

---
